Pipeline Services International (PSI) Celebrates 1st Successful Year of Operations

Houston, Texas – Celebrating their 1st successful year of operations in the offshore market in the Gulf of Mexico, Pipeline Services International (PSI) is focused on continuing future growth opportunities in both the offshore and onshore markets.

Entering the market in late 2007, with state-of-the-art equipment and hand-picked, experienced personnel, PSI quickly established itself as a leader in providing quality services such as pipeline commissioning and decommissioning.

Based on their successful entry into the offshore market and with growing worldwide requirements for decommissioning and commissioning of older platforms and pipelines, PSI will focus on opportunities to service the onshore market as well.

Gordon Barksdale, CEO of PSI said, “Our customers embraced us with open arms as it was clear they were ready for the high-quality services PSI provides. We are seeing the same needs in the onshore market and are steadily building our resources to address both markets”.

Pipeline Services International is the first company in the Gulf of Mexico to focus exclusively on commissioning, decommissioning and abandonment of pipelines. PSI corporate headquarters and operations center is located in Houston, Texas, which allows for fast and cost efficient mobilization to operating bases and ports throughout the entire Gulf of Mexico crescent.
